Your Care Partner for highly dependent patients

AvantGuard. 1600 Bed

Hill-Rom
Enhancing Outcomes for Patients and Their Caregivers
Do back injuries really have to be part of the job?

*We don’t think so*
Keeping caregivers safe and operational is a key priority for every care facility. Let the AvantGuard® 1600 bed take the burden with its intuitive Point-of-Care™ controls and Nurse-Assist features.

Our easy-to-use controls enable caregivers to remain by the patient’s side, at the Point-of-Care™ where they are most needed.

**Integrated weigh scale**

Weighing a patient is as simple as ‘pressing a button’ on either side of the bed:

- Display patient’s weight in increments of 500g or 100g temporarily
- Add or remove items from the bed without altering displayed weight
- Monitor fluid balance

**Greater efficiency**

How does the AvantGuard® 1600 bed help reduce the risks associated with patient moving and handling?
Greater efficiency with fewer injuries

How does the AvantGuard® 1600 bed help reduce the risks associated with patient moving and handling?

Fifth wheel
A fifth wheel allows you to easily and efficiently manoeuvre the bed in any direction.

One-button EasyChair™
The one-button EasyChair™ feature enables caregivers to adjust the bed quickly and as often as required, while minimising the risk of injury.

Line of Site® angle indicators
Easy-to-read Line of Site® angle indicators help you achieve 30–45° head of bed elevation.

Safe and easy patient mobilisation and transport
Higher levels of patient acuity mean that caregivers need to give more assistance than ever before. Taking advantage of the AvantGuard® 1600 bed functions and our expertise in ergonomics, you will safely and effortlessly provide a higher level of care and assistance to your patients.
Helping patients help themselves - and their caregivers

As part of our drive to promote patient autonomy, faster rehabilitation and reduced caregiver effort, our bed is designed to provide areas that patients can hold onto for support when turning, repositioning or egressing the bed safely with less assistance.

Helping to maintain skin integrity

Up to seven bed movements help keep the patient positioned correctly in the bed. By minimising sliding of the patient, the AvantGuard 1600 bed helps prevent shearing that can lead to skin breakdown.

Moreover, Hill-Rom’s therapeutic surfaces provide advanced pressure relief. By minimising siderail gaps they also enhance patient safety and thereby address any concerns you may have about patient falls.
Your Care Partner
Helping you save time and effort

In-bed thoracic x-rays made easy

Bi-Lateral cassette insertion at the point of care
- No need for risky patient moving and handling.
- No need to move the bed away from the wall.
- No interference with medical devices located by the head of bed.
- Saves time and reduces risk associated with displacing critical medical equipment.

…at any Head of Bed angle ergonomic posture & comfort.
…always available integrated cassette tray.
…easily cleaned removable cassette tray.
